

Design Enterprise-Grade Dashboards for Free with the Bold BI[®] Community License

Background

Leveraging 25+ years of experience with transformative technology, [Hamza Jamil](#) cofounded [Zebra Healthcare Ltd.](#) His consultancy, Zebra Healthcare, helps healthcare organizations convert complex data into board-level, actionable analytics. In doing so, Hamza's team empowers healthcare organizations to make data-informed decisions that improve patient care, optimize everyday operations, and cut costs.

Challenges

To implement impactful solutions, Zebra Healthcare avoids hardcoding. Whether users want to view their analytics on a handheld device, or a large desktop screen, Hamza's team strives to deliver dashboards that are tailored to each client's organizational needs. The only problem, Hamza said, was that the team was "spending engineering time creating bespoke dashboards, taking away valuable time from building functionality."

Hamza's team wanted to give their clients more value in less time, so they began searching for a software tool that could lighten their development workload. Through using Syncfusion®, they discovered Bold BI—a BI platform that simplifies data visualization.

Solution

Call to discuss his specific use case. During the meeting, Hamza was able to learn more about the Bold BI Embedded Analytics Community License—which proved to be the perfect solution for his self-funded startup. The Bold BI team also offered to provide further assistance to ensure that Hamza could make the most of his license. Overall, Hamza described his Bold BI support experience as "super helpful with lots of information available to guide the team."

Using the Bold BI Embedded Analytics Community License, Hamza's team transformed raw data into clear analytics for free. With 40+ rich, interactive widgets to choose from, including charts, grids, KPIs, and more, they were able to design and embed unlimited dashboards within their application. Now, they can create custom, enterprise-grade data visualizations significantly faster. "We were able to change how we delivered our dashboards rapidly," Hamza said.
